

03.04.02 Physics

Physics for Nuclear Medicine

Department: "Medical Physics"

Program objective

training of highly skilled masters of physics with specialization in innovative methods and technology of nuclear medicine.

Competitive advantages

- highly multidisciplinary education that includes mathematics, physics, fundamentals of radiochemistry, pathology and biology
- study of real patient cases acquired from partner's hospitals
- practical training in major radiological centers of Russia

Employment opportunities

Researchers in the field of nuclear medicine including competence of medical physicist able to work in nuclear medicine and radiology in a modern hospital.
